EDUCATION

Bachelor of Engineering - Computer Science Sagar Institute of Science & Technology (SISTec)

06/2023 - Present

Bhopal, Madhya Pradesh

PERSONAL PROJECTS

Real-Time Weather App (08/2025 - Present)

- [GitHub link.](#)
- Developed a real-time weather forecasting application using Kotlin and Android Studio. Integrated OpenWeatherMap API with Retrofit for live weather data, implemented Fused Location Provider for location-based results, and followed MVVM architecture for clean and maintainable code.

Chat Application (09/2025 - Present)

- [GitHub link.](#)
- Built a highly scalable real-time chat app using **Kotlin** and **Firestore** with secure Email-based login, real-time messaging via **Cloud Firestore**, and push notifications using **FCM**. Designed a clean MVVM architecture with **RecyclerView** UI, advanced profile management, and image upload support.

News Reader App (10/2025 - Present)

- [GitHub link.](#)
- Developed a modern news app in Kotlin using MVVM, Retrofit, Room, and Coroutines. Implemented API integration for fast, real-time live news updates and designed a smooth, intuitive, user-friendly interface. Added seamless navigation using NavGraph to enhance the overall reading experience.

Food Delivery App (11/2025 - Present)

- [GitHub link.](#)
- Developed a Food Delivery App in Kotlin using MVVM and Jetpack Compose, featuring a modern and responsive UI. Integrated Firebase Authentication and Firestore for secure login and real-time data updates. Utilized NavGraph for seamless navigation, Dagger-Hilt for dependency injection, and Lottie animations to deliver an engaging user experience.

Expense Tracker App (12/2025 - Present)

- [GitHub link.](#)
- Developed an Expense Tracker App using MVVM Architecture, Room Database, Bottom Sheet Dialogs, Date Pickers, and Bottom Navigation, featuring interactive charts and clean UI flows while maintaining a scalable structure and delivering smooth expense management functionality.

Crop Advisory System (10/2025 - Present)

- [GitHub link.](#)
- Developed a robust networking layer for all API calls in the Crop Advisory System, enabling seamless data retrieval for crop and soil advisory, pest detection, weather alerts, marketplace features, digital payments, and community support, ensuring reliability, scalability, and optimized performance.

SKILLS

Kotlin

Coroutines

Flow

Jetpack Compose

MVVM, Clean Architecture

Hilt

Retrofit

Room

Paging 3

WorkManager

Firebase (Auth, Firestore, FCM, Storage, Crashlytics)

GitHub Actions

JUnit

Espresso

ProGuard

LeakCanary

Play Store publishing

ACHIEVEMENTS

Designed intuitive, user-friendly interfaces, boosting user engagement.

Implemented MVVM architecture with Jetpack components for scalable and maintainable code.

Successfully shipped 3 real-world Android applications with modern architecture and repository patterns.

CERTIFICATES

Kotlin for Android Developers (07/2025 - Present)

Gained hands-on experience in building Android apps using **Kotlin**, covering activity lifecycle, UI components, and API integration.

Firebase & Cloud Firestore (08/2025 - Present)

Learned **Firebase Authentication**, **Cloud Firestore**, and **Realtime Database** integration for secure and scalable Android apps
